

[MS-RTASPF]: RTP for Application Sharing Payload Format Extensions

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Preliminary Documentation. This Open Specification provides documentation for past and current releases and/or for the pre-release (beta) version of this technology. This Open Specification is final

documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release (beta) versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

Revision Summary

Date	Revision History	Revision Class	Comments
12/12/2008	1.0		Initial version
02/13/2009	1.01		Revised and edited the technical content
03/13/2009	1.02		Revised and edited the technical content
07/13/2009	1.03	Major	Revised and edited the technical content
08/28/2009	1.04	Editorial	Revised and edited the technical content
11/06/2009	1.05	Editorial	Revised and edited the technical content
02/19/2010	1.06	Editorial	Revised and edited the technical content
03/31/2010	1.07	Major	Updated and revised the technical content
04/30/2010	1.08	Editorial	Revised and edited the technical content
06/07/2010	1.09	Editorial	Revised and edited the technical content
06/29/2010	1.10	Editorial	Changed language and formatting in the technical content.
07/23/2010	1.10	No change	No changes to the meaning, language, or formatting of the technical content.
09/27/2010	2.0	Major	Significantly changed the technical content.
11/15/2010	2.0	No change	No changes to the meaning, language, or formatting of the technical content.
12/17/2010	2.0	No change	No changes to the meaning, language, or formatting of the technical content.
03/18/2011	2.0	No change	No changes to the meaning, language, or formatting of the technical content.
06/10/2011	2.0	No change	No changes to the meaning, language, or formatting of the technical content.
01/20/2012	3.0	Major	Significantly changed the technical content.

1 Introduction

This document specifies the RTP for Application Sharing Payload Format Extensions, a set of proprietary extensions to [\[MS-RTP\]](#). This protocol is designed to transfer application sharing data over the Real-Time Transport Protocol.

Sections 1.8, 2, and 3 of this specification are normative and contain RFC 2119 language. Sections 1.5 and 1.9 are also normative but cannot contain RFC 2119 language. All other sections and examples in this specification are informative.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

encryption
Remote Desktop Protocol (RDP)
Transmission Control Protocol (TCP)

The following terms are defined in [\[MS-OFCSGLOS\]](#):

Application Sharing Multipoint Control Unit (ASMCU)
Multipoint Control Unit (MCU)
Real-Time Transport Protocol (RTP)
RTP packet
RTP payload
Session Description Protocol (SDP)
Session Initiation Protocol (SIP)
Uniform Resource Identifier (URI)

The following terms are specific to this document:

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

References to Microsoft Open Specification documents do not include a publishing year because links are to the latest version of the documents, which are updated frequently. References to other documents include a publishing year when one is available.

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

1.3 Protocol Overview (Synopsis)

This protocol extends the **Real-Time Transport Protocol (RTP)** Extensions protocol, a set of proprietary extensions to the base RTP, as described in [\[RFC3550\]](#), to transfer the application sharing payload encoded in the graphics format described by [\[MS-RDPBCGR\]](#).

1.4 Relationship to Other Protocols

This protocol uses the Real-time Transport Protocol (RTP) Extensions protocol described in [\[MS-RTP\]](#) and the **Transmission Control Protocol (TCP)** described in [\[MS-RTP\]](#) as its local transport protocol. This protocol is the transport protocol for the Remote Desktop Protocol: Basic Connectivity and Graphics Remoting Specification described in [\[MS-RDPBCGR\]](#) and the Remote Desktop Protocol: Multiparty Virtual Channel Extension described in [\[MS-RDPEMC\]](#). **Remote Desktop Protocol (RDP)** is a stream protocol with no boundaries, which means that RDP defines the packet length inside the RDP packet ([\[MS-RDPBCGR\]](#) section 2) and the next RDP packet can immediately follow the previous RDP packet.

RTP is required to use TCP as its transport protocol when transporting payloads for this protocol. For details, see [\[MS-RTP\]](#) section 1.4 for other dependent protocols.

1.5 Prerequisites/Preconditions

This protocol requires all the prerequisites and preconditions of RTP, as described in [\[MS-RTP\]](#) section 1.5.

The RDP protocol is required to turn off **encryption** by setting the encryption level to "None" as described in [\[MS-RDPBCGR\]](#) section 5.3.6.

The RDP protocol is required to turn off Bulk Data Compression for the data between the Viewer and the **Multipoint Control Unit (MCU)**, and also to turn on Bulk Data Compression for the data between the Sharer and the MCU as described in [\[MS-RDPBCGR\]](#) section 3.1.8.

1.6 Applicability Statement

This protocol is used when the RDP payload is transferred over the RTP protocol. The protocol described in [\[MS-SRTP\]](#) is required to provide encryption for the transferred data.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in the following areas:

- **Supported Transports:** This protocol only supports [\[MS-RTP\]](#) as its transport, as discussed in section [2.1](#) and [\[MS-ICE2\]](#) in TCP mode only.
- **Protocol Versions:** This protocol, as a payload format of RTP, does not provide versioning information within the scope of the protocol itself. However, as a part of the RTP payload, any versioning information about the RTP level applies.

The current version is 0x00080004. The current RDP version number can be obtained as described in [\[MS-RDPBCGR\]](#) section 1.3.1.1.

- **Capability Negotiation:** Capability negotiation is done by non-RTP means, usually through a higher level application layer protocol such as **Session Initiation Protocol (SIP)** and **Session Description Protocol (SDP)**.

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

2.1 Transport

This protocol is a payload for the [\[MS-RTP\]](#) transport protocol and therefore relies on RTP and TCP for providing means to transport its payload over the network.

2.2 Message Syntax

[\[MS-RTP\]](#) section 2.2.1 defines the **RTP packet** format and [\[MS-RDPBCGR\]](#) section 2 defines one **RTP payload** format for application sharing.

The total RTP packet size including the transport header, network header, link layer header, RTP header, and RTP payload MUST NOT exceed 1500 bytes, as specified in [\[MS-RTP\]](#) section 2.1; otherwise, the RTP connection will be disconnected. The RTP packets MUST be split so that this limit is not exceeded.

3 Protocol Details

3.1 Peer to Peer Details

The Peer to Peer scenario means that there are two participants in the application sharing session: one sharer and one viewer. As defined in [\[MS-RDPEMC\]](#) section 2.2.4.1, the **FriendlyName** that is sent on the Participant-Created PDU MUST be their local SIP **Uniform Resource Identifier (URI)**.

3.1.1 Abstract Data Model

None.

3.1.2 Timers

None.

3.1.3 Initialization

None.

3.1.4 Higher-Layer Triggered Events

None.

3.1.5 Message Processing Events and Sequencing Rules

The RTP parameters for packet sequence number, RTP marker bit, CSRCCount, and SSRC MUST be set as specified in [\[MS-RTP\]](#) section 2.2.1 and [\[RFC3550\]](#) section 5.1. The RTP marker bit MUST be set to 0 for the message.

The RTP parameter for Payload Type MUST be set to 127 (0x7F) to denote an RDP payload.

When the RTP packets are received on the receiver side, the payload for each RTP packet MUST be assembled in order by the RTP sequence number, and the payload or assembled payloads are interpreted as specified in [\[MS-RDPBCGR\]](#) section 2.

The connection sequence specified in [\[MS-RDPBCGR\]](#) section 1.3.1.1 MUST omit the Security Exchange PDU defined in [\[MS-RDPBCGR\]](#) section 2.2.1.10.1.

3.1.6 Timer Events

None.

3.1.7 Other Local Events

When a packet loss event is detected from [\[MS-RTP\]](#), this protocol stops sending data.

The packet loss is specified in [\[MS-RTP\]](#) section 1.3.

3.2 Multiparty Details

The multiparty scenario means that there are more than two participants in the application sharing session: one sharer and multiple viewers. The sharer and viewers connect to the **Application Sharing Multipoint Control Unit (ASMCU)** using this protocol. For details, see [\[MS-CONFAS\]](#).

3.2.1 Abstract Data Model

None.

3.2.2 Timers

None.

3.2.3 Initialization

None.

3.2.4 Higher-Layer Triggered Events

None.

3.2.5 Message Processing Events and Sequencing Rules

The RTP parameters for packet sequence number, RTP marker bit, CSRCCount, and SSRC MUST be set according to [\[MS-RTP\]](#) section 2.2.1 and [\[RFC3550\]](#) section 5.1.

When the RTP packets are received on the receiver side, the payload for each RTP packet MUST be assembled in order by the RTP sequence number, and the payload or assembled payloads are interpreted as specified in [\[MS-RDPBCGR\]](#) section 2.

The connection sequence specified in [\[MS-RDPBCGR\]](#) section 1.3.1.1 MUST omit the Security Exchange PDU specified in [\[MS-RDPBCGR\]](#) section 2.2.1.10.1.

3.2.6 Timer Events

None.

3.2.7 Other Local Events

When a packet loss is detected, this protocol stops sending data.

The packet loss is specified in [\[MS-RTP\]](#) section 1.3.

4 Protocol Examples

The following RTP Marker is the Payload Type of 127 (0x7F) which is described in [\[MS-RTP\]](#) section 2.2.1.

The following data is an example of one RTP packet that has an RDP payload:

Byte offset	Content	Comments
00	80	RTP Version: 2; Padding: 0; Extension: 0; CSRCCount: 0
01	7F	RTP Marker: 0; RTP payload type: 0x7F
02~03	49 14	RTP Sequence Number: 0x4914
04~07	6E 5D FB A0	RTP Timestamp: 0x6e5dfba0
08~0B	0F 3E 6B 58	RTP SSRC: 0x0F3E6B58
0C~	...	RTP payload (RDP packet)

5 Security

5.1 Security Considerations for Implementers

This protocol has no additional security considerations beyond what is described in [\[MS-RTP\]](#) and [\[MS-SRTP\]](#).

5.2 Index of Security Parameters

None.

6 Appendix A: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include released service packs:

- Microsoft® Office Communications Server 2007 R2
- Microsoft® Office Communicator 2007 R2
- Microsoft® Lync™ Server 2010
- Microsoft® Lync™ 2010
- Microsoft® Lync Server 15 Technical Preview
- Microsoft® Lync 15 Technical Preview

Exceptions, if any, are noted below. If a service pack or Quick Fix Engineering (QFE) number appears with the product version, behavior changed in that service pack or QFE. The new behavior also applies to subsequent service packs of the product unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

7 Change Tracking

This section identifies changes that were made to the [MS-RTASPF] protocol document between the June 2011 and January 2012 releases. Changes are classified as New, Major, Minor, Editorial, or No change.

The revision class **New** means that a new document is being released.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- An extensive rewrite, addition, or deletion of major portions of content.
- The removal of a document from the documentation set.
- Changes made for template compliance.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **Editorial** means that the language and formatting in the technical content was changed. Editorial changes apply to grammatical, formatting, and style issues.

The revision class **No change** means that no new technical or language changes were introduced. The technical content of the document is identical to the last released version, but minor editorial and formatting changes, as well as updates to the header and footer information, and to the revision summary, may have been made.

Major and minor changes can be described further using the following change types:

- New content added.
- Content updated.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.

- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.
- New content added for template compliance.
- Content updated for template compliance.
- Content removed for template compliance.
- Obsolete document removed.

Editorial changes are always classified with the change type **Editorially updated**.

Some important terms used in the change type descriptions are defined as follows:

- **Protocol syntax** refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.
- **Protocol revision** refers to changes made to a protocol that affect the bits that are sent over the wire.

The changes made to this document are listed in the following table. For more information, please contact protocol@microsoft.com.

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
1.4 Relationship to Other Protocols	Added a reference for the RDP packet.	N	New content added.
2.2 Message Syntax	Added info about the limit of the RTP packet size.	N	Content removed.
3.1.5 Message Processing Events and Sequencing Rules	Added an additional reference of [RFC3550] section 5.1 for the RTP parameters.	N	New content added.
3.1.5 Message Processing Events and Sequencing Rules	Clarified that the total RTP packet size includes the transport header, network header, link layer header, RTP header, and RTP payload.	Y	Content updated.
3.1.5 Message Processing Events and Sequencing Rules	Removed info about the limit of the RTP packet size.	N	Content removed.
3.2.5 Message Processing Events and Sequencing Rules	Added an additional reference of [RFC3550] section 5.1 for the RTP parameters.	N	New content added.
3.2.5 Message Processing Events and Sequencing Rules	Clarified that the total RTP packet size includes the transport header, network header, link layer header, RTP header, and RTP payload.	Y	Content updated.

Section	Tracking number (if applicable) and description	Major change (Y or N)	Change type
Rules			
3.2.5 Message Processing Events and Sequencing Rules	Removed info about the limit of the RTP packet size.	N	Content removed.
4 Protocol Examples	Removed the reference for the RDP packet.	N	Content removed.
4 Protocol Examples	Removed information about what happens if an RDP packet is larger than 1024 bytes and about the maximum size of an RTP packet payload.	N	Content removed.
